

Designing for the Future

HIGH PERFORMANCE - ENERGY EFFICIENCY - SUSTAINABILITY

RETHINKING DESIGN:

Using Integrated Design For Achieving Highly Energy-Efficient Buildings

The challenge has been given to us. The architecture and building community need to design and construct high performance buildings... now. How do we meet this challenge?

During these sessions, we will specifically focus on how to effectively use integrated design which will greatly enhance the energy performance of a building without compromising other needs. This systems integration approach has demonstrated the ability to create more comfortable buildings with large operational savings and little or no cost premium. This series is intended for commercial building professionals such as architects, engineers, developers, and building owners.

INDEPENDENCE STATION
award winning project of Aldeia LLC.

WORKSHOP #1 DESIGN SYNERGIES AND CASE STUDIES

This seminar will address how integrated design synthesizes climate, use, loads and systems to deliver a more comfortable, productive and energy-efficient environment, while meeting project requirements and budget. It will also include case studies for several building types that prove achieving a high performance building is very doable.

The workshops are offered at no cost, but space is limited and registration is required.

WORKSHOP #1
Thursday, April 17th
Noon-2:30pm

WORKSHOP #2
Thursday, May 22nd
Noon-2:30pm

LOCATION

**Baker
Downtown
Center**
The Alaska Room
10th and High Street
Eugene, OR 97405

WORKSHOP #2 INTEGRATED DESIGN PROCESS

This session will focus on the detailed requirements of successful integrated design. Learn the patterns, roles and responsibilities that cross-disciplinary teams use to ensure a high performance building.

Fossil Ridge High School, RB+B Architects

ABOUT THE PRESENTER

Doug Bors is an established leader in energy planning, building technology consulting and reliability analysis. He is currently the president of Sophometrics, Inc, a company founded to help architects, owners, and contractors build better communities. He is also a founding member of the Institute for Collaborative Building, a partnership between the University of Washington CAUP and practitioners in the building industry.

Doug is a teacher in his profession; he developed a series of technical and consulting skills classes that grew from 6 to 60 class titles in 15 years. He is a frequent public speaker for organizations that include AIA, NEEC, ASHE, IFMA and BetterBricks.
