Using Daylight AS A Light Source

Wednesday October 14th, 2009

4 PM–5:30 PM - Lane Community College (Main Campus)
Workforce Training Bld. #19 | Room #243

Lisa Heschong has divided her professional practice between energy research, writing and building design. As a researcher, she led the project teams which analyzed the impacts of daylighting on human performance for the Daylighting and Productivity Studies funded through PG&E and CEC. As a writer, she worked with Lawrence Berkeley Laboratories to synthesize their research into Residential Windows. As a lighting expert, she has developed the successful web-based training program for the Federal Energy Management Program (FEMP) and conducted workshops across the country for DOE.

The webcast will provide you with state-of-the-art information on:

- * Strategies to integrate daylight with electric lighting for offices, schools, retail, and other environments
- * Current capabilities of tools to predict daylight illumination levels within a space, to help you understand how daylight illumination will vary by time of day, season and location
- * Daylight's contribution to visual quality, human health & well-being, and our national efficiency goals

There is no charge to attend but seating is limited and registration is required.
