2010 Oregon Energy Code Compliance

Learn about the key components of the 2010 Oregon Energy Efficiency Specialty Code. Last year, the Oregon Building Codes Division released a significant update to the energy code for commercial buildings. The new energy code greatly improves the energy efficiency of buildings and building systems.

The new code seeks continuous improvement in building energy efficiency. At this event, you will:

- Understand the policy drivers and where code is headed.
- Learn the basics of the new code;
- Review compliance options and required software;
- Explore approaches to code compliance for building envelope, lighting and mechanical systems.
